

Version: 3.0-int

Release date: 10/30/2017

The firmware is only for the international version of YI-M1 mirrorless camera.

It is strongly recommended that all users upgrade YI Mirrorless App to 3.0.0 to implement new features.

Firmware version 3.0-int update logs:

◆ NEW

1. Added exposure control in the mode P/A/S/M for video capture
2. Added AF/MF control for video capture
3. Added RAW+JPG format for still capture
4. Added still image option in Time Lapse
5. Added the option to shoot 1-3 images when using the self-timer function with an initial 2 second or 10 second timer setting
6. Added a histogram in live view mode for both still and video capture
7. Added new focus viewing modes with improved image quality including: 6x, 8x and 10x magnification in MF mode
8. Added 2 ways to show the Metering mode in the UI
9. Added the user guide (Restoring factory settings to view)
10. Added multiple selection of images for deletion.
11. Added 2 new options for the display grid
12. AE algorithm optimization
13. Master Guide template display logic optimized
14. Improved AF speed

◆ Fixed

Fixed some known bugs, and improved the overall stability of the system.

◆ Changed

Change the thumbnails in each screen from 9 to 12 images.

See Different.
